

CLAIMS

- [c1] 1. A wireless communication device comprising an apparatus for altering a strength of an encryption system contained therein, comprising:
- a memory for storing a cryptographic key;
 - a first cipher processor for receiving unencrypted data and for generating encrypted data using said cryptographic key and providing said encrypted data to a second cipher processor;
 - said second cipher processor for decrypting said encrypted data using said cryptographic key to generate said unencrypted data and providing said unencrypted data to a third cipher processor; and
 - said third cipher processor for encrypting said unencrypted data using said cryptographic key to generate said encrypted data.
